Welcome to your new University Apple Computer.

Congratulations on receiving a new device. We hope that this device enhances your daily workflow. You can use many like applications like Office 365, Teams, OnBase, as well as other web based applications.

Here are a few pointers when getting started with your new technology.

1) Ensure you are using “Marauder Guest” Wifi network when setting up your device while on campus. If you are at home, you can use your home WiFi. After initial setup you may join the Marauder Wifi using your short username and password.

2) We are starting to roll out new managed AppleID accounts to be used on these devices. You will receive an email from Apple with your new ID as well as a temporary password. You will be asked to change it during the setup process.

3) Your new device is managed by IT and we can push updates to apps and the operating system. Some functionality is restricted, but for the most part you have control of the device.

4) There is an app that is installed by default called Self Service. This is comparable to the MU App Store. You will find many of your day to day applications available and there to be installed. If there is an app you need, please contact the help desk and the app will be there within 1 work day. If an app is a paid app, we have a way to make that happen as well, just contact the help desk.

5) When storing files, please either use Microsoft OneDrive or the iCloud Drive to store files. OneDrive has a capacity of 1TB and iCloud is 200GB.

6) Please affix the attached serial number barcode on the bottom of the computer. You will need that when contacting the help desk for support.

Enjoy using your new technology. Please let us know if you have any questions about your new device by calling the help desk at 717-871-7777.
