Iframe Embedder

Iframe Embedder lets you embed an iframe into the content of a post/page.

What is an iframe?

Frames allow a visual HTML Browser window to be split into segments, each of which can show a different document/page.

- Wikipedia

Usage

You can embed an iframe into a post/page by using the following shortcode:

```
[iframe http://server/page.htm 100% 200px]
```

You can use % or px as units for width and height. If you omit unit- it will default to px. You cannot omit width and height values. You can use relative paths.
