Copying content from another course

How do I copy content from one course into another?

These instructions assume you have already logged in to D2L.

In the following instructions:

- The Destination Course is the shell into which you want to copy materials.
- The Source Course is the shell that already contains the materials you want to copy.

Overview

To copy between courses in D2L Brightspace you pull from the Source Course to the Destination Course.

To do this you:

1. Go into the Destination Course.
2. Use Import / Export / Copy Components in the Destination Course to pull in the materials you want from the Source Course.

Detailed Steps

1. Go to the course homepage of the Destination Course.
2. Click on "" in the navigation bar.
3. Click Import / Export / Copy Components.
4. Leave selected the bubble for Copy Components from Another Org Unit.
5. Leave checked the box for Include protected resources.
6. Click the Search for offering button.
7. In the Select Course Offering window that opens:
   a. Locate the Source Course by one of the following methods:
      i. Type all or part of the name of the Source Course in the Search for box and click the search button.
      ii. Browse through the list of your courses, using the Page controls to switch to other pages of the course list, if necessary.
   b. Click the bubble at the left end of the Source Course’s row.
   c. Click the Add Selected button.
8. Choose what materials to copy from the Source Course to the Destination Course.
   - If you want to copy everything from the Source Course:
     a. Click the Copy All Components button.
   - If you want to copy only materials from within certain tools (e.g. Content, Quizzes, Surveys)
     a. Click the Select Components button.
     b. Check the box next to each tool for which you want to copy materials.
   - Check the box to the left of each item you wish to copy. Click the + controls, if available, to reveal individual items inside groupings.
   - When you have checked the box for each item you want to copy, click the Continue button.
   - Wait for D2L to queue and process your copy request.

To copy materials from Content, you must check the boxes for both Content and Content Display Settings.

c. If you want to copy only certain materials from within a given tool, click the bubble next to Select individual items to copy under that tool.

d. Click the Continue button.

e. If you did not choose Select individual items to copy for any tools, skip this step.

You can use Import / Export / Copy Components again to copy more materials from the same, or from different, source courses. Be careful not to copy the same materials multiple times though as this will create duplicates in the Destination Course, and the duplicates can be troublesome to clean up.
