Intelligent Agents

How to Create and Trigger Intelligent Agents

Intelligent Agents can be created for a number of reporting and communication purposes within a D2L course. Agents can identify students who have or have not logged in to a course, completed or not completed course activity or achieved a designated grade on a course activity. Agents can be set to email student(s) who satisfy the agent or be run manually by instructors as a form of analytics.

⚠️ These instructions assume you have already logged in to D2L.
